

Starkey's nFusion Technology represents a groundbreaking advance in better hearing. The first on-the-ear hearing instrument ever to use nanoscience in its design, our Destiny 1200 OTE instruments offer a combination of features not available in any other product: the industry's highest-ranked feedback cancellation and directional microphone system, outstanding noise reduction filters, resulting in beautiful sound quality and greatly enhanced comfort in challenging listening situations.

Find out how the Destiny 1200 OTE can bring you back to the world of clear, natural hearing, without compromising your comfort. Finally, a light, comfortable, easy-to-use device that delivers the listening experience you deserve.

It's Destiny.

Destiny 1200 OTE

Your Future Is Here.

Get better, clearer,
more natural hearing with
the most technologically
advanced OTE available.

It's Destiny.

Effortless Hearing Through Superior Science

The conversion from analog to digital hearing aids roughly a decade ago improved overall sound quality. But several problems — such as feedback, echoes, static, and white noise — remained. Then Starkey Laboratories developed its landmark nFusion Technology, a cutting-edge scientific breakthrough that eliminated these problems. The result was Destiny: a digital hearing instrument created with the power and intelligence of nanoscience that was sensitive, adaptive, and measurably outperformed its competitors. But until recently, this revolutionary product was not available in an on-the-ear (OTE) model.

Now, with the release of the Destiny 1200 OTE models, you can experience the most natural sound quality our industry has to offer, while enjoying the comfort and discretion of a small, light on-the-ear option. As with the other Destiny 1200 products, these sophisticated hearing instruments feature the industry's best feedback cancellation, superior noise management that's fully automatic and improved speech clarity. Soft, pliable earbuds and revolutionary software make fitting the Destiny 1200 OTE's fast and accurate, so you can achieve better hearing more quickly.

1200

1200 OTE

1200 OTE DSD

Standard Destiny 1200

OTE Features:

Active Feedback Intercept — proven the most effective feedback elimination system ever developed. AFI uses an entirely new patent-pending method that virtually erases nuisance signals.

Acoustic Signature — state-of-the-art noise management differentiates between up to 4 classes and reduces their interference so that you hear more clearly and comfortably in noisy places. And, it's all done automatically so you don't have to do any manual switching.

Adaptive Indicator Tones — customizable sound alerts for low battery, memory change, etc., that adjust in volume so you can hear them even in noisy environments.

The Destiny 1200

OTE DSD includes:

Directional Speech Detector — DSD provides better speech clarity than any other product on the market today with the quietest directional mode in hearing aid history.
