

Active Feedback Intercept (AFI) is the most rapid and successful feedback elimination system ever developed. This is because AFI uses an entirely new patent-pending method that actually adapts so quickly and seamlessly that not only does the feedback virtually disappear, there are no irritating sound artifacts left behind.

Directional Speech Detector (DSD) — standard on behind-the-ear styles and optional on ITE through ITC and OTE — Starkey's DSD is ranked top in our industry, with a design focused on providing you the best directional performance in noisy environments. DSD continuously monitors the speech and noise levels and automatically turns on the directional microphone whenever doing so will improve your ability to hear speech more clearly and easily in a noisy environment.

Acoustic Signature, our state-of-the-art noise management system, is featured on all Destiny products. This remarkable system distinguishes between up to 4 classes of noise and reduces the interference of these so that you hear more clearly and comfortably in noisy places.

Starkey's nFusion Technology represents a groundbreaking advance in better hearing. The first instrument ever to use nanoscience in its design, Destiny offers features never before possible: switching so automatic it responds to even the most subtle environmental changes, effective feedback elimination, and a pleasant natural sound quality.

The best technology is designed with you in mind. That's nFusion. Find out how the powerful circuit inside Destiny can bring the world of natural hearing back to you.

Your Future Is Here.

Get better, clearer, more natural hearing with the most technologically advanced digital instrument available. **It's Destiny.**

Better Hearing Through Superior Science

Starkey Laboratories has spent years researching cutting-edge technology to eliminate issues such as feedback, echoes, and difficulty hearing in noise to significantly improve your hearing experience in a wide variety of environments. The result: Destiny, a digital hearing instrument created with the power and intelligence of nanoscience, and the sensitivity and adaptability of the human ear.

With Destiny, you can enjoy hearing again. Sounds are classified and processed automatically by a state-of-the-art integrated circuit using a complex series of algorithms. Fitting is fast and comfortable, switching is seamless, quality hearing is assured, and focus is amazingly easy to achieve.

Finally, a device that delivers the listening experience you deserve.
